OUR OPERATIONAL APPROACH & CAPACITY

We approach our operations and services with a prime view to offer our clientele the most sought after and credible precious metals assaying and refining services in our plush facility. We have installed the state-of-the art Plant and Equipment with the capacity to determine the most credible quality composition and purity of our refined final products.

Our production design is scheduled to carefully melt any scrap lots or raw gold, properly sampled and clearly identified with customer and lot number which enhance our ability to determine the content of the metal via a fire-assay process or through the use of X-RAY Fluorescence (XRF) Machine. We uphold the age-old fire assaying as the most widely recognized process because of its accuracy in determining the precious metal content of a sample. The XRF utilizes the latest technology available to us and assists us with verification of all metal-contents contained in the sample. This ensures greater accuracy and value-for-money to the customers. As well as we have high tech technology of Electrolsys capacity to refine raw gold of 100k into a refined gold of 99.95% per day. Which all our refined gold are being tested and approved as well as accredited by Ghana Standard Authority which meets all International Standard of refined gold.

At HIL Refinery, we take this step very seriously because we take trust as our core value very seriously and always aspire to make our assay services the most accurate in the industry from our precise fire assay to our XRF assaying. In addition, we have the Professionals with the requisite skill-set, competence and integrity unrivaled in the industry to provide excellent service supply of the right quantity and quality to any customer as timely as possible.
